Instructions from Alex

Text Alex when necessary during exam or lab. Includes if a call is necessary; she might have to call back. Dan will be 2 doors down during lab.

EXAM

- Expect 54 of 57 students
- All electronics, including smart watches and deceives, get put into their bags and set aside against the wall by the entrance. They will not need a calculator for this one.

1. Hand out exams. Instruct them NOT to open or turn over exam until told to START
2. Announce:
   "There are 30 questions total and 1 extra credit question. Of the 30, 20 are multiple choice and 10 are short answer that you will complete directly on the exam. The exam has a cover page with an answer sheet where you will place all the answers to the 20 multiple choice questions. You can detach this answer sheet so that you can work side by side with the exam, but you should have your names on both sheets"
   "The exam is timed for 60 minutes and a timer will be projected for you so you can monitor your pace."

For the lab, hand out the experiment at the end of the exam before they leave so they can start prepping for lab.

LAB:

1. Use the sign-in sheet for attendance.
2. Ensure proper lab wear/PPE: goggles and coat at start if lab
3. Leave Alex's single slide up for the entire period for their reference.

Work in groups of 3 because of hood space. There will be two groups per hood.

ANNOUNCE:

"Set up a water bath first with the hot plates and monitor the temperature and water level during the entire lab session"
"Before you leave, bring your completed lab report form to me and I will review and initial it"

Look for the supplies (chems/materials) that will be set up. Alex will check ahead of time with Simon about what is prepared and send an update if needed.

SETUP:

1. Use the two hoods by the doors for chemicals
   The chemicals should have their own pipets attached to the bottles.
2. Students should prep their tubes and then go to the hood they are working in.
3. There should a non-halogenated waste container. Keep it on the left side of the waste hood by the prep room door but really stress to them that they ONLY use the non-halo waste.
4. Model kits are under the balances by the entrance (labelled Snatoms).
5. There should be test tube clamps and beaker tongs and search for them at start of lab for exact location in room (Alex will also advise)

PowerPoint slide of To-Dos for lab (added as slide 1 to Alex's PPTX)

1. Complete the physical portion of the lab.
2. Complete the Report Sheet and Questions.
3. Complete Post-Exam Reflection on Canvas.
4. Review Mod 3 slides, complete Mod 3 assignment.
