Hello Chem 3A students,

This is special version of Midterm Examination #1.

This special midterm is usually ONLY prepared for students who add the Chem 3A course after the mid-week day of Week 2 of the semester.

For this semester, there are other unanticipated occurrences where students with other qualifications to take the exam will sit for it, and I am adding these qualifications to the list. This is my 3rd semester teaching Chem 3A, so I am learning too how to teach it and accommodate for students affectively.

I hope you all feel you had adequate time to prepare and were guided in the plans and pattern of the course explained in lecture and in Canvas Announcements.

This exam covers Weeks 1 through 3 Canvas Module items. Assignments in the forms of MyOpenMath assessments prepared as their own course by a full-time instructor recognized for her excellence in the teaching of this course and others at the College were utilized to help you learn details of chemistry in both qualitative and quantitative aspects related to Student Learning Outcomes part of the Course Outline of Record (COR) required by those who administer community college districts. These assignments include Homework, Homework Review for Weeks 1 through 3, as well as the Pre-lecture quizzes from those weeks.

You were provided with midterm examinations from previous semesters which are the better guide for preparing for this exam. In fact, this exam you are taking is from one of the exams given in the Spring 2026 semester with changes to questions of the quantitative and qualitative kind. There actually may be one or two questions in the exam that are unchanged entirely.

The conditions of the examination—what you bring to it, what will be provided for you—are the same as for the regularly scheduled examination.

If you are taking the exam on Thursday 10 September, starting a little after 3 pm and the period ending about 4:50 pm (10 minutes before lecture start), I will be administering the exam in Room NS-335, first lab room on the 3rd floor of New Science. Think of going to the lab as you normally would, but instead of being at the end of the corridor on the 3rd floor, it's the first room on the right of the corridor.

If you are taking the exam on Friday 11 September, your exam will be administered by the Chemistry GRASP group. GRASP are full-time instructors providing tutoring and other services on Fridays between 8:00 a.m. and 2:00 p.m. They are located in Room NS-127, the 1st floor of New Science. They will be informed of the students to take the exam and provided instructions by me along with the materials for the exam. While students can enter the GRASP room between the 8am-2pm time block, I want to inform the GRASP group of your approximate time. Since the GRASP group closes at 2 pm, you MUST start taking the exam at a time to give yourself enough time to complete the exam and NOT go over the 2 pm hour. If you decide to sit at 1:30 pm to take the exam, you will have only

30 minutes to complete it (so 1:30 pm is not a good time to choose to start the exam if you feel you need more time).

If you have other arrangements for when and where to take the exam, follow the instructions for those arrangements.

All students choosing to take this special Midterm Examination #1 must complete it by 11 September.

This exam was actually prepared from the Special Midterm Exam #1 given to students in the Spring 2026 semester. If you really need more hints and clues about what to study, study this exam, which is attached to this message.

I have attached the slides given to students about the conditions for preparing for the exam.

YOU ARE ALLOWED HANDWRITTEN NOTES on s 3 x 5-inch index card (or paper cut to that size. The Notes can be on both sides of the card/paper. They are NOT allowed to be machine-printed. Only handwritten

Good luck.

use for scratch paper
